

MAKERERE

UNIVERSITY

COLLEGE OF HEALTH SCIENCES

SCHOOL OF MEDICINE

DEPARTMENT OF ANAESTHESIA

**EVALUATION OF EFFICACY AND SAFETY OF LABOUR ANALGESIA BY
INTRATHECAL MORPHINE WITH FENTANYL**

COMPARED TO

MORPHINE WITH BUPIVACAINE IN MULAGO HOSPITAL

A DOUBLE BLINDED RANDOMIZED CONTROL TRIAL

BY

DR TIMOTHY MUYIMBO, MBChB (GULU)

REGISTRATION NUMBER: 2011/HD07/2061U

SUPERVISORS:

1. **DR JOSEPH TINDIMWEBA :** MBCHB (MAK), D.A. (MAK) M.MED, HEAD OF DEPARTMENT ANAESTHESIA (MAK).
2. **DR ANDREW KINTU :** MBCHB (MAK), M.MED(MAK), ANAESHTESIOLOGIST MULAGO HOSPITAL, OBSTETRIC ANAESTHESIOLOGIST (MCMASTER).
3. **DR MICHAEL BALIKUDDEMBE:** MBCHB (MAK), M.MED (MAK), OBSTETRICIAN AND GYNAECOLOGIST(MULAGO).

**A DISSERTATION SUBMITTED TO THE SCHOOL OF POSTGRADUATE STUDIES
IN PARTIAL FULFILLMENT OF THE AWARD OF MASTERS OF MEDICINE IN
ANAESTHESIA AND CRITICAL CARE**

MAKERERE UNIVERSITY

JULY 2014.

DECLARATION

I Dr Timothy Muyimbo, hereby declare that the work presented was personally done by me in Mulago hospital Uganda and this dissertation has not been presented for any other degree or academic award in any other University or higher institution of learning.

Signed.....date...../...../.....

Dr Timothy Muyimbo (Author).

The dissertation has been submitted for examination with the approval of the following supervisors:

Signed.....date...../...../.....

Dr. Joseph Tindimweba: MBCHB (MAK), D.A. (MAK) M.MED, RETIRED HEAD OF DEPARTMENT ANAESTHESIA (MAK).

Signed.....date...../...../.....

Dr. Andrew Kintu: MBCHB (MAK), M.MED(MAK), ANAESHTESIOLOGIST MULAGO HOSPITAL, LECTURER (MAK), OBSTETRIC ANAESTHESIOLOGIST(MCMASTER).

Signed.....date...../...../.....

Dr. Michael Balikuddembe: MBCHB (MAK), M.MED (MAK), OBSTETRICIAN AND GYNAECOLOGIST(MULAGO).

DEDICATION

This book is dedicated to all health workers trying with the little facilitation available, to make their patients' lives better.

ACKNOWLEDGMENTS

Special thanks go to a long time friend and colleague, Dr Anne Wesonga for the continuous support and encouragement, members of department of Anaesthesia, my supervisors Dr Joseph Tindimwebwa and Dr Andrew Kintu for the tireless mentorship and guidance through out proposal development to report writing, and to Dr Michael Balikuddembe of Obsetrics for being on ground with me. To my team- Drs Semmanda. H. and Nampuma. M . for volunteering to help.

Finally to my sponsors AAGBI for their continued support throughout the M.med programme making it a worthwhile experience.

TABLE OF CONTENTS:

TABLE OF CONTENTS:	i

OPERATIONAL DEFINITIONS	v
ABSTRACT.....	vii
CHAPTER ONE: INTRODUCTION	1
1.1 INTRODUCTION	1
1.2 STATEMENT OF THE PROBLEM.....	2
1.3 OBJECTIVES	2
1.3.1 GENERAL OBJECTIVE:	2
1.3.2 SPECIFIC OBJECTIVES:.....	2
1.4 RESEARCH QUESTION.....	3
1.5 HYPOTHESIS:	3
1.6 JUSTIFICATION	3
CHAPTER TWO: LITERATURE REVIEW.....	4
2.1 DRUG PROFILES.....	4
2.2 EFFECTS OF NEURAXIAL ANALGESIA ON DURATION OF LABOUR	5
2.3 EFFECTS OF NEURAXIAL ANALGESIA ON THE FETUS AND NEONATE:.....	6
2.4 SIDE EFFECTS OF NEURAXIAL ANALGESIA ON THE MOTHER:.....	6
2.5 FACTORS THAT AFFECT PROVISION OF LABOUR ANALGESIA	6
2.6 RESEARCH GAP:	7
CHAPTER THREE: METHODOLOGY	8
3.1 RESEARCH DESIGN.....	8
3.2 RESEARCH AREA.....	8
3.3 RESEARCH POPULATION.....	8
3.4 RESPONDENTS	8
3.5 INCLUSION AND EXCLUSION CRITERIA.....	8
3.6 SAMPLE SIZE DETERMINATION	9
3.7 SAMPLING PROCEDURE	10
3.7.1 PATIENT SAMPLING PROCEDURE	11
3.7.2 PARTICIPANT RANDOMIZATION.....	12
3.7.3 SEQUENCE GENERATION	12
3.7.4 ALLOCATION CONCEALMENT	12
3.7.5 ALLOCATION.....	12
3.8 METHOD OF ANALGESIA AND PROCEDURE	12
3.9 DATA MANAGEMENT.....	14
3.9.1 DATA COLLECTION	14
3.9.2 DATA ENTRY	14
3.9.3 DATA ANALYSIS	14
3.10 ADVERSE EVENTS MONITORING.....	14
3.11 QUALITY CONTROL.....	15

3.12 ETHICAL CONSIDERATIONS.....	15
3.13 DISSEMINATION OF RESULTS.....	15
3.14 LIMITATIONS OF THE STUDY	16
CHAPTER FOUR.....	17
4.1 STUDY PROFILE	17
CHAPTER FIVE	24
5.1 DISCUSSION.....	24
5.2 EFFICACY OUT COMES.....	24
5.3 SAFETY OUTCOMES	25
5.4 STUDY LIMITATION.....	26
5.5 CONCLUSIONS.....	26
5.6 RECOMMENDATIONS:	26

APPENDIX A: CONSENT FORM IN ENGLISH	30
APPENDIX B: CONSENT FORM IN LUGANDA.....	33
APPENDIX C: LABOUR ANALGESIA MONITORING RECORD:.....	38
APPENDIX D: VISUAL ANALOG SCALE.....	41
APPENDIX E: BROMAGE SCORE	42
APPENDIX F: THE PREGNANCY UNIQUE QUANTIFICATION OF EMESIS/NAUSEA SCORE (PUQE)	43
APPENDIX G: WOKP PLAN	44
APPENDIX H: BUDGET ESTIMATE:	45

TABLE OF FIGURES

Figure 1: A figure showing participant flow	17
Figure 2: A figure showing the trend of pain relief for the two randomization arms.	20
Figure 3: A figure showing patient satisfaction with the interventions	20
Figure 4: A figure showing preferences for pain relief.....	21

LIST OF TABLES

Table 1 : A table showing distribution of participant's characteristics between the randomization study arms.....	18
Table 2 : A table showing duration of analgesia (in hours).....	19
Table 3 : A table showing onset of analgesia	19
Table 4: A table showing distribution of adverse events between the two randomization arms	22
Table 5: A table showing fetal outcomes.....	23

ABBREVIATIONS/ACRONYMS

IM - Intramuscular injection.

ITN- Intrathecal narcotics.

ITA- Intrathecal analgesia.

IV - Intravascular injection.

PI - Principle investigator.

OPERATIONAL DEFINITIONS

PARTURIENT

Is a woman in labour or one about to give birth.

ACTIVE LABOUR

Is the period of increased rapidity of cervical dilation from 4cm that ends with complete cervical dilation of 10 cm (Campbell & Lees, 2000).

PAIN

Is an unpleasant sensory and emotional experience associated with actual or potential tissue damage, or described in terms of such damage (Merskey, 1979).

ANALGESIA

Absence of the sense of pain without loss of consciousness.

ANAESTHESIA PROVIDER

In this study refers to a person with the necessary knowledge and skills to administer safe anaesthetic.

EFFICACY

In this study refers to longer duration of analgesia.

SAFETY

In this study refers to absence or less occurrence of side effects.

VISUAL ANALOG SCALE

Is a psychometric response instrument for quantifying of subjective characteristics or attitudes that cannot be directly measured, in this case pain and pruritus.

BROMAGE SCALE

Scale which assesses the intensity of motor block by the patient's ability to move their lower extremities.

THE PREGNANCY UNIQUE QUANTIFICATION OF EMESIS/NAUSEA SCORE (PUQE)

Assessment guide developed by clinicians and researchers to ascertain the Mother risk for nausea and vomiting.

ABSTRACT

Pain during labour is severe and in developed countries, is always treated with methods including neuraxial techniques such as combined spinal epidural analgesia. This improves maternal satisfaction with the birthing process. Studies have been done that show ITN is a cheaper yet efficacious alternative in settings where the more expensive therapeutic is not feasible. Several studies found that many African women would desire to have labour analgesia if given the opportunity. Similarly a study by Dr Nabukenya, 2013 in Mulago showed 87.91% of the participants wanted labour analgesia for their next delivery. In Mulago hospital no such service exists despite presence of anaesthesiologists and obstetricians with the knowledge, skills of the different possible techniques and availability of medications that can be used in single dose spinal analgesia to treat labour pain. Opioids or local anaesthetics can be used, alone or in combination. In combination, smaller doses are needed to have prolonged synergistic effects. A major limitation in Mulago was unavailability of long acting intrathecal morphine but it's now available. After this study, information will be available regarding how efficacious and safe use of intrathecal morphine in combination with another short acting opioid or local anaesthetic is, in an effort to start a labour analgesia service in Mulago. General objective was to evaluate the efficacy and safety of intrathecal morphine-fentanyl as single dose spinal analgesia in comparison to morphine-bupivacaine regarding duration of analgesia, occurrence of side effects, fetal outcome and maternal satisfaction. It was a double blinded randomized control trial at Mulago hospital labour ward. Parturients in active normal labour were recruited. Sampling was done consecutively on those who accepted ITN, followed by block randomization until the sample size of 138 was achieved. Data was collected by piloted questionnaires, entered into Epi data version 3.1, analyzed by Stata version 12 and disseminated to directorate of research, school of postgraduate studies Makerere University. Study was conducted from 28th January to 10th March 2014. 138 parturients were recruited with 69 being block randomized to each arm. The mean duration of analgesia was, 3.80 (0.70) hours, 132 (95.65%) of the parturients had onset of analgesia within five minutes, more than 92% of parturients were very satisfied with the analgesia and more than 97% said to recommend it to their friends. The study demonstrated no significant difference in the level of side effects either to parturients or fetus. Both combinations give adequate duration of analgesia. It's cheap and effective with high maternal satisfaction. For both drug combinations, there are no serious fetal effects.
